Gold King Mine Blowout, Silverton CO. [Emergency Response]: On August 11, 2015, ERT member Henry Gerard in coordination with ERT member Greg Powell and On-Scene Coordinator (OSC) Steve Merritt, provided consultation on possible field analytical implementation. The analyte of interest are Lead, Arsenic, Cadmium, Chromium and Manganese with the objective of finding a method that is portable and rugged as well as meeting the detection requirements. The Hach DR 2800 is the chosen analytical instrument and it is currently being evaluated for its efficiency and efficacy.
